Two tidal flows and two tidal falls occur daily in a 24-hour period. The tidal range is the difference in height between the highest and lowest tides. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.

Â 2. à²à³à¸• à¸à¸¼ à¸à¸¼à¸¼à¸¼à¸¼ à¸à¸¼à¸¼à¸¼à¸¼ à¸à¸¼à¸¼à¸¼à¸¼à¸¼ (Neap Tide)

Two equal tidal flows and two equal tidal falls occur daily in a 24-hour period. The tidal range is smaller than during a spring tide. This occurs when the sun and moon are at right angles to each other relative to Earth.

The tidal range is the difference in height between the highest and lowest tides. The tidal range is smaller during a neap tide. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.

The tidal range is the difference in height between the highest and lowest tides. The tidal range is smaller during a neap tide. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.

Â 3. à¸à¸¼à¸¼à¸¼à¸¼ à¸à¸¼à¸¼à¸¼à¸¼ à¸à¸¼à¸¼à¸¼à¸¼ (Diurnal Tide)

One tidal flow and one tidal fall occur daily in a 24-hour period. The tidal range is larger than during a neap tide. This occurs when the sun and moon are on the same side of Earth relative to each other.

The tidal range is the difference in height between the highest and lowest tides. The tidal range is larger during a diurnal tide. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.

The tidal range is the difference in height between the highest and lowest tides. The tidal range is larger during a diurnal tide. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.

Â 4. à¸à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼ à¸à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼ (Semi-Diurnal)

Two tidal flows and two tidal falls occur daily in a 24-hour period. The tidal range is larger than during a neap tide. This occurs when the sun and moon are on the same side of Earth relative to each other.

The tidal range is the difference in height between the highest and lowest tides. The tidal range is larger during a diurnal tide. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.

Â 5. à¸à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼à¸¼ (Mixed Tide)

The tidal range is the difference in height between the highest and lowest tides. The tidal range is larger during a diurnal tide. The tidal range varies throughout the day and is affected by the position of the moon and sun relative to Earth.
